

Connecting the Industry to Realize Smart Procurement Solutions – The el/ka/sy® Ecosystem

Classic C-parts management systems of wholesalers, also called kanban systems, often only map a part of all kanban-capable articles. Consequently, further articles cannot be handled or only with high handling surcharges.

Often, suppliers and manufacturers with their own brands also do not want to deliver via third-party kanban systems. The result is that different processes are in use for kanban handling.

Own ERP solution versus effort

Own ERP solutions offer you a way out here. However, in many cases they mean significantly more effort for your IT department, especially for the maintenance and support of such a system. In addition, on the supplier side, not every supplier is willing to take on the effort of a separate interface for every customer. Which again leads to different processes and to high manual effort in the Kanban processing.

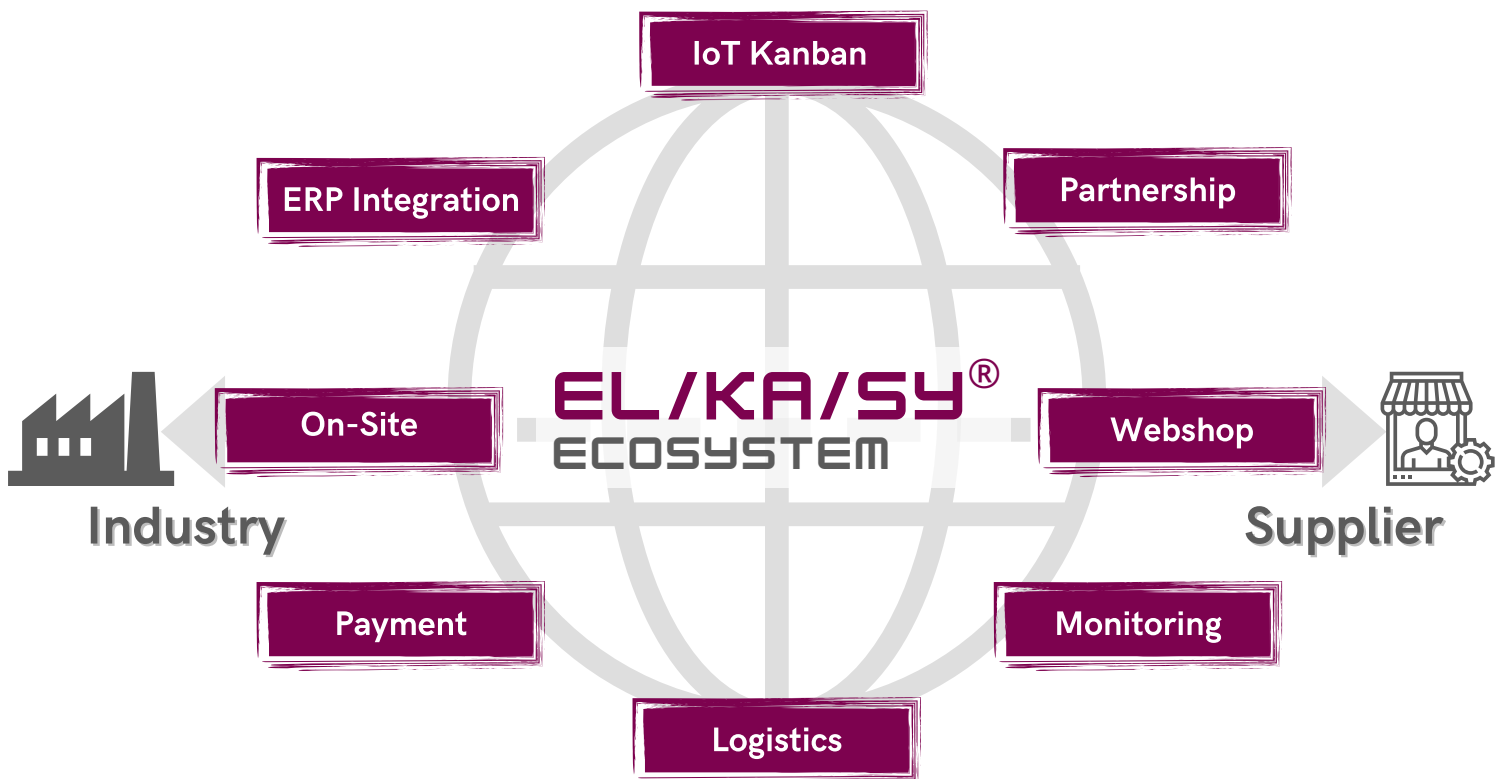

The solution is an intelligent procurement system that connects you with all your suppliers. Through maximum digitization and networking, you can focus again on the value-adding activities and thus expand your competitiveness.

With the el/ka/sy® ecosystem into the future

In your el/ka/sy® ecosystem, data is collected and automatically retrieved at every relevant point. Excel, email ping pong, pdf exchange and countless phone calls will soon be a thing of the past for our partners.

Transparency and flexibility are the basic requirements to survive in the market. With the el/ka/sy® ecosystem you get both and much more.
